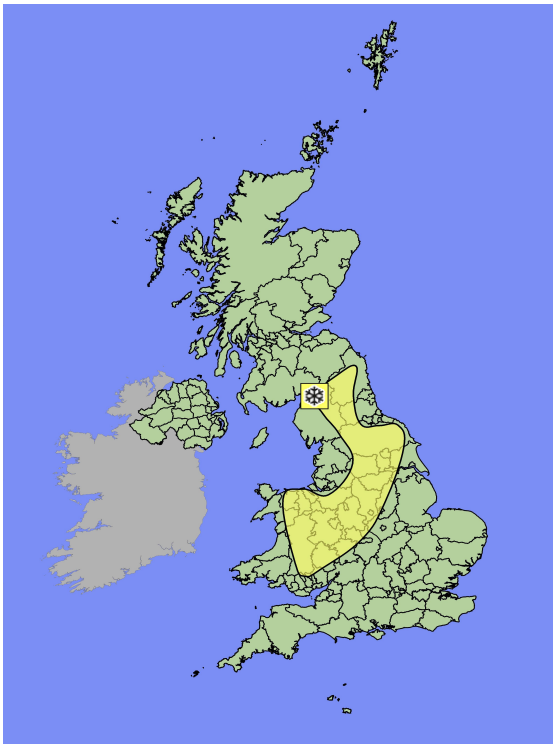
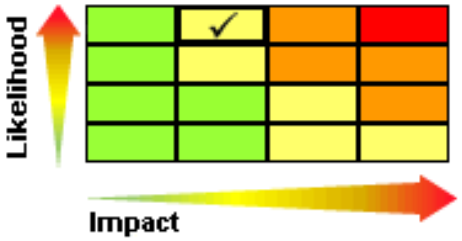
National Severe Weather Warning Service





Chief Forecasters Assessment
There remains uncertainty regarding how much will accumulate, much depending on intensity of the precipitation. Snow is likely to accumulate on grass verges but, road surfaces themselves, could stay largely snow-free due to the heat that remains in the ground following the warm weather last month. Little snow accumulation is expected below 200m where roads should remain problem free.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **12:00 on Tue, 03rd Apr 2012** until **18:00 on Wed, 04th Apr 2012**

Rain is expected to turn to snow on high ground as colder air moves south across England and Wales on Tuesday and Wednesday. Some 2-5cm of snow is likely in places, mainly above around 200m with as much as 10 to 15cm possible above 300m. Little, if any, snow is expected to accumulate on roads and pavements below 200m. The area of rain, sleet and snow will clear from the north during Wednesday.
